Cessna 172 Circuit Procedures, Issue 2

1. Before take-off

Complete the before take-off checks at the holding point.

The strobe and the landing light must be ON before entering the runway.

Rotate at about 55 KIAS and climb at 70 to 80 KIAS.

2. Climb and crosswind

Do not turn crosswind below 500 ft AGL.

3. Circuit height

Circuits are flown at 1,000 ft AGL. Never exceed 1,100 ft AGL on the downwind leg.

4. Flaps

Do not select flaps beyond 10 degrees above 85 KIAS.

The maximum speed with 10 degrees of flap is 110 KIAS.

5. Airspeed limits

Never exceed 163 KIAS.

6. After landing

Retract the flaps once clear of the runway.

Set the parking brake before shutdown.

Taxi slowly and keep a good lookout for other aircraft.
